

# HEMLOCK WOOLLY ADELGID TRAINING

Hemlock Woolly Adelgid (HWA) is an invasive insect that is threatening the ecological health and beauty of our local forests. Come learn how to identify and monitor HWA and sign up for ongoing surveys in your area.

Mark Whitmore of Cornell University and the NYS Hemlock Initiative will provide information on the HWA biology, life cycle, impacts to forests, field identification, and what we can do to protect our forest ecosystems.

**PLEASE RSVP! — TEXT/ EMAIL:**  
Sheila Hess, CC Environment & Planning  
Phone: 716-560-1768  
Email: [shess@ccenvironment.com](mailto:shess@ccenvironment.com)
